Background and General Description

Purpose

This document explains the methodology utilized by the Information Technology Services Division in developing rates for communications services provided to state agencies, colleges, and universities. The authorization to develop rate structures and establish a charging system is provided under Chapter 37, RSMo 1986.

This Cost Allocation Plan, and the process by which it is developed, is consistent with the revolving administrative trust fund methodology utilized by the Information Technology Services Division the past several years. The estimated expenditures and rates set forth herein provide the means for ensuring full cost recovery based on agency use of services. As with any plan, actual events and historical data will require close monitoring and some revisions.

Pricing Concepts

The major objective of the Information Technology Services Division is to provide state agencies and organizations cost effective and efficient shared communications resources. Achievement of this objective results in improved productivity in state government and more effective delivery of governmental services to the citizenry by state agencies.

The charging systems or objectives associated with this Cost Allocation Plan methodology can be summarized as follows:

1. establish usage sensitive pricing of services
2. provide rate stabilization
3. develop a cost for the total communications service package which is less than can be obtained elsewhere
4. provide agencies maximum flexibility in controlling use
5. minimize the impact of future rate changes and/or cost increases
6. maximize economies of scale opportunities available through resource sharing.

Revolving Administrative Trust Fund

The revolving administrative trust fund was established to receive funds paid or transferred to the Office of Administration by agencies of the state for goods and services utilized by such agencies. Spending ceiling authorization is enacted annually by appropriation and any unencumbered balance in excess of 1/12 of the amount appropriated to the revolving

administrative trust fund at the close of the fiscal year reverts to the general revenue fund in accordance with other provisions of the law. No monies are actually provided to the Office of Administration under this appropriation. The funds to pay for communications services are appropriated by the General Assembly directly to the state agencies, colleges, and universities. Payment for communications services are made by the Office of Administration from the revolving administrative trust fund. The fund is then replenished by monthly billing to state agencies, colleges and universities based on the use of services.

Expenditure Planning

One of the key components of this Cost Allocation Plan is developing an overall schedule and general allocation of anticipated expenditures. The expenditure plan contained in Section C of this report reflects the best estimate of the costs required to provide communications services to state agencies over a twelve month period.

Development Methodology

A cost-based development methodology was employed in establishing the billing rates detailed in Section E of this plan. The benefits of this cost based methodology are two fold: (1) as a full cost approach, both direct and indirect costs are included, and the problem of under or over recovery of communications total budget costs is minimized, (2) it provides an equitable method for cost recovery; i.e., the rate is based on the amount of resources utilized.

The methodology for development of this Cost Allocation Plan can generally be summarized as the execution of the following eight work steps:

1. Determine Services Provided

The types of services provided by the Telecommunications and Network sections are based on the requirements of state agencies and are typically similar to services provided by regulated telephone utilities, facility based carriers, other common carriers, and resellers of inter-city telecommunications services. These services are provided by the Office of Administration when the state can obtain enhanced shared features and realize economy of scale.

2. Establish Units of Service

The unit of service utilized to measure the volume of service provided for each service type was established based on three major criteria: relationship to the function performed, measurability, and level of control which can be exercised by the customer agencies.

3. Compile Estimates of Utilization

The Fiscal Year 2007 utilization of each service category was compiled. The category estimates were then used as a basis for projections or estimates for Fiscal Year 2008 of each type of service.

4. Identify Types of Costs

Two basic types of costs were identified: (1) allocated direct; and (2) allocated indirect. Allocated direct costs were those costs that can be directly identified with providing a type of service. Costs allocated indirectly are related costs that cannot be directly identified with providing a specific type of service.

5. Determine Allocated Direct Costs

Budgeted expense and equipment costs that could be directly identified with providing a specific type of service were accumulated to determine total allocated direct cost by type of service. In some cases an expense or equipment cost applies to more than one service category. The cost is then split by percentage among the appropriate type of service.

6. Determine Allocated Indirect Costs

Budgeted expense, equipment and personnel costs that could be indirectly identified with providing a specific type of service were accumulated to determine total allocated indirect cost by type of service.

7. Summarized Total Cost by Service

Total cost by service was determined by adding the direct and indirect allocated costs.

8. Calculate Cost Per Unit of Service

The cost per unit of service was calculated by dividing the total annual cost by the total estimated annual utilization.

Service Category Definitions

1. Centrex Access

The basic unit of service provided by State Telecommunications to customers is access (dial tone). Embarq provides this service under the service mark of Centrex in Jefferson City, Rolla, Warrensburg and Maryville. This basic unit of service allows customers the ability to receive calls from any customer of the world-wide telecommunications system. Also associated with this basic service unit is the unlimited ability of Jefferson City, Rolla, Warrensburg and Maryville customers to call other customers within their system with four or five digit dialing. This category also includes some other Embarq service areas and additional locations will be added throughout the year. Service to Butler, California, Clinton, Lebanon and Warsaw was added in Fiscal Year 2003. Major cost components identified with this service element are the line charges and features which allow transmission and receipt of calls from the nationwide toll centers and the Federal End User charge.

2. State Long Distance

Within the Long Distance rate are those costs of the dedicated facilities (T-1s) on the private network that are located between the various cities to support voice traffic. Also included in the Long Distance rate are cost components of central office equipment required to provide switching capability of state telephones (Plexar/Centrex) from local calling only to WATS calling and long distance calling within the private network. WATS access and price per minute is also a component of long distance. (WATS is a long distance service which completes a call between a network location and a non-network location or known as the public switched network.)

3. PLEXAR Access

Access (dial tone) is the basic unit of service provided to customers in cities served by AT&T Telephone Company and has the trademark of PLEXAR. This basic unit of service allows customers to receive calls from any caller on the worldwide telecommunications system. It also permits customers to have the unlimited ability to place calls on the local and state networks and allows three, four and five digit dialing within their system. The major cost elements associated with this service are the feature and station line charges and the Federal End User charge.

4. Data Circuits

Data circuit service is the physical facility and PVCs costs that are used for transport of data applications. Physical facilities include intrastate (inter and intra LATA) and interstate circuits connecting two or more locations together on a dedicated basis as well as Frame Relay and local circuits. In general, this service provides the agencies with the order processing, billing functions and contract administration required with the dedicated data circuits. The cost element with this service is the circuit costs and an administrative fee.

5. Voice Mail

This category of service provided to customers is access from the central office to the systems located in Jefferson City, Hannibal, Carthage, St. Joseph, Kansas City, Springfield, Sikeston, Hillsboro, Neosho, Nevada, Sedalia, Lee's Summit, Cape Girardeau, Farmington, Poplar Bluff, New Madrid, Joplin, St. Charles and St. Louis. The cost elements of this service include a monthly lease charge for the boxes in Warrensburg and Rolla as well as maintenance on owned systems.

6. Pass-Through Telephone Service

Pass-Through service is the process by which the charges billed by the telephone vendors are in turn billed to the appropriate agencies. Charges incurred for services such as local service, toll, and calling cards etc. are billed to the agencies with an administrative fee added.

7. Toll-Free

This category is for Toll-Free service such as 800, 888, 877 and 866 numbers where agencies pay the per-call costs instead of the caller. The cost elements for this service include circuit, per minute service cost and an administrative fee.

8. Managed WAN

This category is for the monitoring, maintenance and equipment associated with managing state agency Wide Area Networks (WAN). In general, this service provides agencies with the service level agreements, trouble shooting and reporting, equipment refreshes, network design and consulting.

9. Internet Services

Internet Services supplied to state agencies include bandwidth, redundancy, security measures, monitoring and troubleshooting. These services enable state employees to access a wealth of information available on the Internet, as well as allowing state agencies to provide information and e-business services to our customers. Agencies can also additionally utilize these services for VPN (virtual private network) connectivity to remote users or offices, as well as other services such as videoconferencing connectivity to locations outside the boundaries of state government.

10. Network and Security Connections

Network and Security Connection services represent the “core” network and security functions provided to all state agencies. As the enabler for connectivity from any agency to enterprise applications (e.g., SAM II), inter-agency electronic communications, or agency connectivity to the Internet, these services also provide various levels of security and redundancy for the customer structures. In addition, technical and consulting services are provided to agencies through this category.

Collectable Costs / Utilization = Monthly Access Line Cost

$$\frac{\$3,301,298}{272,076} = \$12.13$$

Additional Plexar Charges:*

FEDERAL UNIVERSAL FUND*	\$0.08
<u>MISSOURI UNIVERSAL FUND*</u>	<u>\$0.04</u>

TOTAL \$12.25

Plexar Pricing Policy:

- Lines added after the beginning of the fiscal year will be at cost if cost is greater than CAP until the next annual CAP is developed. New Plexar lines which cost more than CAP will be evaluated by the Rate Committee and may never be in the CAP rate.
- Customers pay all install charges.
- Rates are based on a 7-year agreement, customers pay all penalties related to early disconnects.

**Additional charges may increase or decrease throughout the Fiscal Year depending on FCC or PSC rulings.*
